TRUNAL PATIL

Full-Stack Developer ● AgenticAI & Data-Driven Systems

Mumbai, Maharashtra, India | Email: patiltrunal06@gmail.com| github.com/Trunal2005 | linkedin.com/in/trunal-patil

SUMMARY

Third-year Computer Engineering student building full-stack, AI- and data-driven products — from a business intelligence platform that turns raw uploads into decision-ready data, to a bounded, guardrailed AI agent for automated payment recovery. Comfortable across the stack: React/Next.js front ends, Flask/FastAPI back ends, PostgreSQL/SQL, and REST API design. Focused on building AI and data systems that are practical, tested, and accountable — not just technically impressive.

EDUCATION

Vidyalankar Institute of Technology — Mumbai, India *Sept 2024 – May 2028 (Expected)*

Bachelor of Technology in Computer Engineering — 3rd Year *CGPA: 8.75 / 10*

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems

TECHNICAL SKILLS

- **Full-Stack:** React, Next.js, JavaScript/TypeScript, HTML/CSS, Flask, FastAPI, REST API design & integration, Python
- **AI / Generative AI:** Google Gemini API, LLM Applications, Generative AI, Prompt Engineering, Pydantic, AI Agents, RAG, LangChain, scikit-learn, Decision Trees, Supervised Learning
- **Data & Analytics:** PostgreSQL, SQLite, MySQL, Pandas, NumPy, Matplotlib, automated data profiling, data-quality/health scoring, star-schema warehouse design
- **Tools:** Git, GitHub, JWT Auth, Tailwind CSS, Vitest

PROJECTS

Autonomous Business Intelligence Platform | *Next.js, FastAPI, PostgreSQL, Google Gemini API*

- Designed and built a full-stack BI platform — Next.js frontend, FastAPI backend, PostgreSQL data layer — with JWT auth and role-based workspaces so multiple users can securely upload and explore their own datasets.
- Built a CSV/XLSX ingestion pipeline with automated type inference and profiling, then used the Gemini API to score data health (missing values, duplicates, outliers) and a heuristic fact/dimension engine to auto-generate star-schema warehouses in PostgreSQL — turning raw uploads into decision-ready, query-able data.

GitHub: github.com/Trunal2005/Business-Intellignece-Platform

AI Revenue Recovery | *Next.js, TypeScript, Google Gemini API, Razorpay API, SQLite*

- Built a bounded AI recovery agent that classifies failed payments through a deterministic policy engine, then calls Gemini (schema-constrained via generateObject) to choose a recovery strategy within strict guardrails — the AI never touches payment execution directly.
- Executed recovery through Razorpay Payment Links and verified outcomes via HMAC-authenticated, idempotent webhooks; shipped with 84 passing tests across 17 files and an immutable audit log.

AI Resume Analyser | *Python, Flask, Google Gemini API, pypdf*

- Built an LLM-powered web app using Google Gemini Pro to parse resume PDFs, score job-description compatibility, and generate targeted improvement suggestions for the user.
- Integrated a pypdf extraction pipeline, dynamic API key injection, and a Demo Mode for testing without live credentials.

LEADERSHIP & ACHIEVEMENTS

Nitrix Talent Media — Co-Founder & Chief Marketing Officer *Mar 2025 – Present*

- Built and manage a network of 1,000+ creators; run influencer campaigns for brands including Nestlé/Nescafé.
- Analyze campaign performance (engagement, reach, ROI) to guide digital strategy for 5+ brand partners.
- **2x National-Level Hackathon Finalist**

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional — Oracle
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate — Oracle
- Full Stack Web Development — Skill Up
- Python — Skill Up
